EXAMINER'S AMENDMENT

1. Authorization for this examiner's amendment was given in a telephone interview with Mr. Mark Levy on January 5, 2004.

The application has been amended as follows:

In the claims:

- a*. In claim 1 at line 8, please delete the phrase "at least one additive selected from the group consisting of".
- b. In claim 1 at line 9, please change "plating" to --electroplating--.
- c. In claim 2 at line 1, please change "pulse has" to --pulses have--.
- d. In claim 3 at line 1, please change "pulse has" to --pulses have--.
- e. In claim 4 at line 1, please change "pulse has" to --pulses have--.
- f. In claim 5 at line 1, please change "pulse has" to --pulses have--.
- g. In claim 6 at line 1, please change "pulse has" to --pulses have--.
- h. In claim 7 at line 1, please change "pulse has" to --pulses have--.
- i. In claim 30 at line 1, please change "plating" to --electroplating--.
- j*. Please cancel claims 27-29.

*These changes incorporate the changes submitted by Applicant in the amendment submitted November 26, 2003. The amendment was considered non-compliant because the amendment to claim 1 used the phrase "twice amended", which is not an accepted form. Under the new format, the correct phrase is "currently

amended." All changes indicated in the amendment have been incorporated in this Examiner's Amendment.

2. The following is an examiner's statement of reasons for allowance:

The instant method is distinguished over the prior art of record by providing a method using a modulated reversing electric current in a bath devoid of levelers and brighteners to electroplate metal on the interior surface of a cavity with an aspect ratio greater than about 8:1. While the prior art of record teaches elements of the method, the prior art neither teaches nor suggests the combination of both a modulated reversing electric current and a bath devoid of levelers and brighteners to plate the interior of high aspect ratio cavities. Martin et al. (US 6,071,398) teaches the use of similar pulse trains, but the electroplating bath contains an additive and carrier, which is used for grain refinement (col. 4, lines 7-15), i.e., the additive and carrier function as a brightener. Likewise, Dubin et al. (US 6,491,806) also teach the use of additives with pulsed plating, wherein the additives include polyethylene glycol and sulfur-containing compounds, which acts as levelers and brighteners, respectively. Due to the difficulty in electroplating the interior surfaces of cavities, it would not be readily apparent to one skilled in the art that the interior surface of a cavity may be plated without the use of both brighteners and levelers.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
